

Arista Access Switch - Alarm 4919 Troubleshooting SOP

Node: Arista-Access-Bangalore-KA-82 | **Vendor:** Arista | **Severity:** Warning | **Alarm Code:** ALARM_4919

Description

This SOP outlines the steps to troubleshoot and resolve Alarm Code ALARM_4919 on the Arista Access Switch, Bangalore-KA-82.

Potential Root Causes

Cause	Probability
Misconfigured VLAN or VLAN trunking information on the switch	High
Incorrect or missing port settings	Medium
Incompatible switch firmware or configuration	Low

Diagnostic Commands

```
show vlan | include
show vlan trunking | include
show interface switchport
show running-config | include or
```

Resolution Steps

- Step 1: {'Step': 'Verify VLAN configuration and trunking information on the switch', 'Action': 'Run the show vlan and show vlan trunking commands to verify the VLAN configuration'}
- Step 2: {'Step': 'Verify port settings on the affected ports', 'Action': 'Run the show interface switchport command to verify the port settings'}
- Step 3: {'Step': 'Check for incompatible switch firmware or configuration', 'Action': 'Run the show version and show running-config commands to verify the switch firmware and configuration'}
- Step 4: {'Step': 'Correct any misconfigured VLANs or trunking information', 'Action': 'Use the vlan command to modify the VLAN configuration and/or configure the VLAN trunking information'}
- Step 5: {'Step': 'Correct any incorrect or missing port settings', 'Action': 'Use the switchport command to modify the port settings'}

Post-Check Verification

```
show vlan | include  
show vlan trunking | include  
show interface switchport  
show running-config | include or
```
