

Arista-Access-Mumbai-MH-36 SOP for ALARM_1945

Node: Arista-Access-Mumbai-MH-36 | **Vendor:** Arista | **Severity:** Critical | **Alarm Code:** ALARM_1945

Description

Critical Alarm due to high CPU usage on Arista-Access-Mumbai-MH-36 Access Switch.

Potential Root Causes

Cause	Probability
High CPU usage due to software bugs or misconfiguration.	High
Insufficient memory allocation or resource intensive processes.	Medium
Malicious activity or denial of service attack.	Low

Diagnostic Commands

```
show system resource cpu
show system resource memory
show processes
show system resource process
```

Resolution Steps

- Step 1: {'Step': 'Restart the switch', 'Description': "Issue the command 'reload' to restart the switch.", 'CLI_Command': 'reload'}
- Step 2: {'Step': 'Clear CPU-intensive processes', 'Description': "Issue the command 'process clear ' to clear CPU-intensive processes.", 'CLI_Command': 'process clear '}
- Step 3: {'Step': 'Increase memory allocation', 'Description': "Issue the command 'memory allocation increase' to increase memory allocation.", 'CLI_Command': 'memory allocation increase'}
- Step 4: {'Step': 'Monitor system resources', 'Description': 'Regularly monitor system resources to prevent similar issues.', 'CLI_Command': 'show system resource cpu'}

Post-Check Verification

```
show system resource cpu
show system resource memory
show processes
show system resource process
```
