

Cisco Access Switch ALARM_1612 Warning SOP

Node: Cisco-Access-Bangalore-KA-80 | **Vendor:** Cisco | **Severity:** Warning | **Alarm Code:** ALARM_1612

Description

This SOP outlines the steps to diagnose and resolve the ALARM_1612 Warning on the Cisco Access Switch Node ID: Cisco-Access-Bangalore-KA-80.

Potential Root Causes

Cause	Probability
High CPU Utilization due to excessive packet processing	High
Misconfigured QoS Policy	Medium
Insufficient Memory	Low

Diagnostic Commands

```
show processes cpu
show qos policy-map
show memory
show system resources
```

Resolution Steps

- Step 1: {'Step': 'Verify CPU Utilization', 'Action': "Use the 'show processes cpu' command to monitor CPU utilization. If high CPU utilization is observed, proceed to Step 2.", 'CLI_Command': 'show processes cpu'}
- Step 2: {'Step': 'Check QoS Policy Configuration', 'Action': "Use the 'show qos policy-map' command to verify QoS policy configuration. If misconfigured, modify the QoS policy to correct the issue.", 'CLI_Command': 'show qos policy-map'}
- Step 3: {'Step': 'Verify Memory Availability', 'Action': "Use the 'show memory' command to verify memory availability. If memory is low, consider upgrading the switch or freeing up memory by deleting unnecessary files.", 'CLI_Command': 'show memory'}
- Step 4: {'Step': 'Clear Alarm', 'Action': "Use the 'clear alarm' command to clear the ALARM_1612 warning.", 'CLI_Command': 'clear alarm'}

Post-Check Verification

```
show alarm history
```

```
show system resources
```
