

SOP for Resolving Alarm ALARM_4058 on Cisco Access Switch Delhi-NCR-20

Node: Cisco-Access-Delhi-NCR-20 | **Vendor:** Cisco | **Severity:** Major | **Alarm Code:** ALARM_4058

Description

Alarm ALARM_4058 is triggered when a critical system failure occurs on Cisco Access Switch Delhi-NCR-20, impacting network connectivity and reliability.

Potential Root Causes

Cause	Probability
High CPU utilization due to software bugs or misconfiguration	High
Hardware failure or degradation	Medium
Insufficient power supply or power quality issues	Low

Diagnostic Commands

```
show processes cpu sorted
show system resource usage
show power consumption
show interface status
```

Resolution Steps

- Step 1: {'Step': '1. Check system logs for error messages', 'Action': 'show log'}
- Step 2: {'Step': '2. Verify CPU utilization and identify resource-intensive processes', 'Action': 'show processes cpu sorted'}
- Step 3: {'Step': '3. Check for hardware issues and perform a power cycle', 'Action': 'power cycle'}
- Step 4: {'Step': '4. Verify power supply and ensure it's functioning correctly', 'Action': 'show power consumption'}
- Step 5: {'Step': '5. Perform a software reload or reboot if necessary', 'Action': 'reload'}

Post-Check Verification

```
show system resource usage
show power consumption
show interface status
```

show log
