

SOP for Resolving ALARM_4570 on Cisco-Access-Kolkata-WB-112

Node: Cisco-Access-Kolkata-WB-112 | **Vendor:** Cisco | **Severity:** Critical | **Alarm Code:** ALARM_4570

Description

ALARM_4570 on Cisco-Access-Kolkata-WB-112 is a critical alarm indicating a potential hardware or software failure on the access switch.

Potential Root Causes

Cause	Probability
Hardware Failure	High
Software Bug	Medium
Misconfiguration	Low

Diagnostic Commands

```
show logging | include ALARM_4570
show tech-support
show interface status
show inventory
```

Resolution Steps

Step 1: {'Step': '1. Power cycle the switch', 'Action': "Use the 'power on' and 'power off' commands to cycle the power on the switch."}

Step 2: {'Step': '2. Check for hardware issues', 'Action': "Use the 'show inventory' command to verify the hardware configuration and check for any faulty components."}

Step 3: {'Step': '3. Verify software version', 'Action': "Use the 'show version' command to verify the software version and check for any available updates."}

Step 4: {'Step': '4. Check for misconfiguration', 'Action': "Use the 'show configuration' command to verify the switch configuration and check for any misconfigured settings."}

Step 5: {'Step': '5. Reset the switch to factory defaults', 'Action': "Use the 'write erase' and 'reload' commands to reset the switch to its factory defaults."}

Post-Check Verification

```
show logging | include ALARM_4570
show interface status
show inventory
show version
```
