

Standard Operating Procedure for Cisco-Access-Kolkata-WB-124: Alarm Code ALARM_4661

Node: Cisco-Access-Kolkata-WB-124 | **Vendor:** Cisco | **Severity:** Major | **Alarm Code:** ALARM_4661

Description

Cisco-Access-Kolkata-WB-124 Access Switch is experiencing a Major alarm due to ALARM_4661. This SOP outlines the steps to diagnose and resolve the issue.

Potential Root Causes

Cause	Probability
Physical Layer Interface Failure	High
Software Configuration Issue	Medium
Hardware Malfunction	Low

Diagnostic Commands

```
show interface status
show interface GigabitEthernet 0/1/0
show logging
show tech-support
```

Resolution Steps

- Step 1: {'Step': '1. Check Physical Layer Interface', 'Action': 'Verify if the interface is connected properly and the SFP is securely clicked in place.'}
- Step 2: {'Step': '2. Check Software Configuration', 'Action': '"Verify the interface configuration using the command 'show running-config interface GigabitEthernet 0/1/0'."}
- Step 3: {'Step': '3. Check for Hardware Malfunction', 'Action': '"Run the command 'show tech-support' to gather detailed hardware information.'}
- Step 4: {'Step': '4. Restore Default Configuration (if necessary)', 'Action': '"Enter privileged mode and execute the command 'configure terminal', then 'default interface GigabitEthernet 0/1/0'."}
- Step 5: {'Step': '5. Verify Interface Status', 'Action': '"Execute the command 'show interface status' to verify the interface status.'}

Post-Check Verification

```
show interface status
show interface GigabitEthernet 0/1/0
show logging
```
