

SOP for Resolving Critical Alarm ALARM_9644 on Cisco Access Switch Cisco-Access-Kolkata-WB-124

Node: Cisco-Access-Kolkata-WB-124 | **Vendor:** Cisco | **Severity:** Critical | **Alarm Code:** ALARM_9644

Description

Critical Alarm ALARM_9644 on Cisco Access Switch Cisco-Access-Kolkata-WB-124 is triggered due to a high-priority issue.

Potential Root Causes

Cause	Probability
High CPU utilization	High
Link flapping or interface issues	Medium
STP or Loop Protection issues	Low

Diagnostic Commands

```
show tech-support
show processes cpu
show interface brief
show spanning-tree detail
show stp root
```

Resolution Steps

- Step 1: {'Step': 'Verify CPU utilization and identify the process causing high CPU usage', 'Action': 'show processes cpu | include '}
- Step 2: {'Step': 'Check for link flapping or interface issues', 'Action': 'show interface | include flap'}
- Step 3: {'Step': 'Verify STP or Loop Protection configuration', 'Action': 'show spanning-tree detail'}
- Step 4: {'Step': 'Reset the interface or disable the process causing high CPU usage', 'Action': 'clear | restart '}

Post-Check Verification

```
show interface
show processes cpu
show spanning-tree detail
```

```
show stp root
```
