

Cisco Access Switch - Alarm 1870 SOP

Node: Cisco-Access-Kolkata-WB-126 | **Vendor:** Cisco | **Severity:** Critical | **Alarm Code:** ALARM_1870

Description

Alarm 1870 on Cisco Access Switch (Node ID: Cisco-Access-Kolkata-WB-126) indicates a critical issue. This SOP outlines the root causes, diagnostic steps, resolution actions, and verification commands to troubleshoot and resolve this alarm.

Potential Root Causes

Cause	Probability
High CPU utilization due to misconfigured QoS policies	High
Software bugs or defects in the Cisco IOS software	Medium
Hardware issues such as faulty interfaces or power supply failures	Low
Network congestion or oversubscription	Medium

Diagnostic Commands

```
show process cpu | include IPC
show system resources | include Memory
show interface brief | include errors
show power inline 0/0 | include status
```

Resolution Steps

- Step 1: {'Step': '1. Check CPU utilization and QoS policies', 'Action': 'show process cpu | include IPC', 'CLI_Commands': 'adjust QoS policies or reset CPU-intensive processes'}
- Step 2: {'Step': '2. Check memory resources', 'Action': 'show system resources | include Memory', 'CLI_Commands': 'delete unnecessary processes or increase memory allocation'}
- Step 3: {'Step': '3. Check interface errors and congestion', 'Action': 'show interface brief | include errors', 'CLI_Commands': 'reset interfaces or adjust network configuration'}
- Step 4: {'Step': '4. Check power supply status', 'Action': 'show power inline 0/0 | include status', 'CLI_Commands': 'replace faulty power supplies'}

Post-Check Verification

```
show process cpu | include IPC
show system resources | include Memory
```

```
show interface brief | include errors  
show power inline 0/0 | include status
```
