

SOP for Major Alarm ALARM_8382 on Cisco Access Switch Cisco-Access-Kolkata-WB-126

Node: Cisco-Access-Kolkata-WB-126 | **Vendor:** Cisco | **Severity:** Major | **Alarm Code:** ALARM_8382

Description

The ALARM_8382 is a major alarm triggered on the Cisco Access Switch Cisco-Access-Kolkata-WB-126 due to a critical issue. This SOP outlines the steps to diagnose, resolve, and verify the issue.

Potential Root Causes

Cause	Probability
High CPU Utilization on the Switch	High
Misconfigured QoS Policy	Medium
Hardware Failure on the Switch	Low

Diagnostic Commands

```
show processes cpu
show qos policy-map
show interface status
show system resource
```

Resolution Steps

- Step 1: {'Step': 'Check CPU Utilization', 'Action': "Run the command 'show processes cpu' to check the CPU utilization on the switch. If the utilization is high, proceed to the next step."}
- Step 2: {'Step': 'Verify QoS Policy Configuration', 'Action': "Run the command 'show qos policy-map' to verify the QoS policy configuration. If the policy is misconfigured, correct the configuration and verify it."}
- Step 3: {'Step': 'Check Hardware Status', 'Action': "Run the command 'show interface status' to check the hardware status of the switch. If there is a hardware failure, contact the vendor for assistance."}
- Step 4: {'Step': 'Restart the Switch', 'Action': 'If all the above steps do not resolve the issue, restart the switch to see if it resolves the issue.'}

Post-Check Verification

```
show processes cpu
show qos policy-map
```

```
show interface status  
show system resource
```
