

SOP for ALARM_5360: Cisco Provider Edge Router

Minor Alarm

Node: Cisco-PE-Delhi-NCR-33 | **Vendor:** Cisco | **Severity:** Minor | **Alarm Code:** ALARM_5360

Description

This SOP outlines the procedures for troubleshooting and resolving the ALARM_5360 on Cisco-PE-Delhi-NCR-33, a Cisco Provider Edge Router.

Potential Root Causes

Cause	Probability
BGP session flap due to invalid routing update	Medium
Routing policy mismatch between peering routers	High
BGP session instability due to network congestion	Low

Diagnostic Commands

```
show ip bgp summary
show bgp neighbors
show ip route detail
show ip access-lists
```

Resolution Steps

- Step 1: {'Step': 'Verify BGP session status and neighbor IP', 'Action': "Run 'show ip bgp summary' and 'show bgp neighbors ' commands"}
- Step 2: {'Step': 'Verify routing policy configuration', 'Action': "Run 'show ip access-lists' command and check for policy mismatches"}
- Step 3: {'Step': 'Check for network congestion', 'Action': "Run 'show interface detail' command to check for congestion"}
- Step 4: {'Step': 'Reset BGP session if necessary', 'Action': "Run 'clear bgp soft' command to reset the BGP session"}
- Step 5: {'Step': 'Verify routing policy configuration after resolution', 'Action': "Run 'show ip access-lists' command to verify policy configuration"}
- Step 6: {'Step': 'Verify BGP session status after resolution', 'Action': "Run 'show ip bgp summary' command to verify BGP session status"}

Post-Check Verification

```
show ip bgp summary
show bgp neighbors
show ip route detail
show ip access-lists
```
