

Huawei Access Switch Alarm Resolution SOP

(ALARM_4492)

Node: Huawei-Access-Bangalore-KA-66 | **Vendor:** Huawei | **Severity:** Critical | **Alarm Code:** ALARM_4492

Description

Critical Alarm on Huawei-Access-Bangalore-KA-66: High CPU Utilization

Potential Root Causes

Cause	Probability
CPU Overload due to software bugs	High
High traffic volume on the access switch	Medium
Misconfigured Quality of Service (QoS) settings	Low

Diagnostic Commands

```
display cpu process | exclude sys
display interface brief
display qos
```

Resolution Steps

Step 1: {'Step': 'Restart the access switch', 'Action': 'reload', 'Note': 'This will clear the CPU cache and restart the switch.'}

Step 2: {'Step': 'Verify and adjust QoS settings', 'Action': 'config qos', 'Note': 'Check and adjust QoS settings to ensure they are not causing the CPU overload.'}

Step 3: {'Step': 'Upgrade the software to the latest version', 'Action': 'upgrade package active', 'Note': 'Check the Huawei support website for the latest software release and follow the upgrade procedure.'}

Post-Check Verification

```
display cpu process | exclude sys
display interface brief
display qos
```
