

Huawei PE Router Root Cause Analysis for Alarm ALARM_3826

Node: Huawei-PE-Mumbai-MH-57 | **Vendor:** Huawei | **Severity:** Critical | **Alarm Code:** ALARM_3826

Description

Analysis of Alarm ALARM_3826 on Huawei Provider Edge Router PE-Mumbai-MH-57

Potential Root Causes

Cause	Probability
Route Leaking	High
Routing Information Protocol (RIP) Issues	Medium
BGP Neighbor Down	Low

Diagnostic Commands

```
display current-configuration | include bgp
display bgp peer all brief
display rip routing-table
debug bgp all
```

Resolution Steps

- Step 1: {'Step': 'Verify BGP Neighbors', 'Action': "Check if all BGP neighbors are up and stable using 'display bgp peer all brief'.", 'CLI_Commands': 'display bgp peer all brief', 'Expected_Output': 'All BGP neighbors should be up and stable.'}
- Step 2: {'Step': 'Check for Route Leaking', 'Action': "Verify if there are any route leaking issues using 'display current-configuration | include bgp'.", 'CLI_Commands': 'display current-configuration | include bgp', 'Expected_Output': 'No route leaking issues should be observed.'}
- Step 3: {'Step': 'Verify RIP Routing Table', 'Action': "Check the RIP routing table for any discrepancies using 'display rip routing-table'.", 'CLI_Commands': 'display rip routing-table', 'Expected_Output': 'RIP routing table should be stable and up-to-date.'}
- Step 4: {'Step': 'Reset BGP Neighbor', 'Action': "Reset the BGP neighbor using 'reset bgp '.", 'CLI_Commands': 'reset bgp ', 'Expected_Output': 'BGP neighbor should come up after reset.'}

Post-Check Verification

```
display bgp peer all brief
display bgp summary
```

```
display rip routing-table
```
