

SOP for Resolving ALARM_2056 on Juniper-Core-Mumbai-MH-1

Node: Juniper-Core-Mumbai-MH-1 | **Vendor:** Juniper | **Severity:** Critical | **Alarm Code:** ALARM_2056

Description

ALARM_2056 is a Critical alarm indicating a failure in the Routing Information Base (RIB) on Juniper-Core-Mumbai-MH-1. This SOP outlines the steps to identify and resolve the issue.

Potential Root Causes

Cause	Probability
High CPU usage due to RIB overflow	High
Misconfigured RIB groups	Medium
Incompatible routing protocols	Low

Diagnostic Commands

```
show route summary
show routing-engine
show system processes cpu
show firewall filter
show policy-options policy
```

Resolution Steps

- Step 1: {'Step': '1. Check RIB groups configuration', 'Description': "Verify RIB group configuration using 'show route summary' command", 'Commands': ['show route summary']}
- Step 2: {'Step': '2. Adjust RIB group parameters', 'Description': 'Adjust RIB group parameters to optimize RIB performance', 'Commands': ['set routing-options rib-group max-prefixes ', 'commit']}
- Step 3: {'Step': '3. Check routing protocols compatibility', 'Description': "Verify compatibility of routing protocols using 'show routing-engine' command", 'Commands': ['show routing-engine']}
- Step 4: {'Step': '4. Adjust routing protocols configuration', 'Description': 'Adjust routing protocols configuration to ensure compatibility', 'Commands': ['set protocols bgp group ', 'commit']}

Post-Check Verification

```
show route summary
show routing-engine
```

```
show system processes cpu
```
